TECHNICAL SKILLS

Languages: Python, Golang, JavaScript, SQL (PostgreSQL, MySQL)

Frameworks: FastAPI, Node.js, Django, Gin, Express.js

Cloud & DevOps: AWS (CDK, Lambda, EC2, DynamoDB, S3, SNS, Kinesis, CloudWatch), Docker, GitHub Actions, Jenkins

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis

Monitoring: Grafana, CloudWatch, Prometheus, Application Performance Monitoring

PROFESSIONAL EXPERIENCE

Software Engineer

Nov 2024 – Present

GrayQuest

Mumbai, India

- Spearheaded Golang migration of backend services, achieving 3× throughput improvement and 40% reduction in CPU utilization across webhook processing and ERP integration workloads handling 10,000+ daily transactions.
- Architected microservices with optimized concurrency patterns, reducing P95 API latency from 800ms to 320ms while maintaining sub-10s processing under peak load.
- Engineered payment integrations with Razorpay, Easebuzz, Cashfree, and Juspay, processing Rs. 50Cr+ daily volume with 99.9% uptime and sustained 1+ TPS.
- Redesigned payment reconciliation pipelines using event-driven architecture, cutting latency by 50% and stabilizing webhook flows handling 3+ callbacks per transaction.
- Delivered end-to-end payment gateway with Razorpay, Digio, and CCAvenue integrations, implementing Jenkins CI/CD pipelines and achieving 85%+ test coverage.

Software Engineer & Co-Founder

Oct 2023 – Nov 2024

Digitalyft

Mumbai, India

- Architected algorithmic trading infrastructure on AWS using Python and FastAPI, onboarding 50+ clients and processing 100,000+ daily trades with real-time execution.
- Built high-throughput order management systems handling 1,000+ messages/second, enabling seamless multi-broker strategy orchestration.
- Optimized broker API integration to achieve sub-500ms order placement latency, improving fill rates by 15% during high-volatility conditions.
- Designed hybrid AWS architecture (EC2 + Lambda), reducing infrastructure costs by 50% while handling 5× traffic spikes.
- Implemented Docker and GitHub Actions CI/CD pipeline, achieving zero-downtime deployments and reducing deployment time from 45 to 8 minutes.

Associate Software Engineer

Jun 2021 – Oct 2023

Hexaware Technologies

Pune, India

- Developed 10+ production AWS Lambda functions for Fortune 500 airline's data platform, processing 5M+ events daily with 99.95% success rate and sub-200ms execution.
- Provisioned serverless infrastructure using AWS CDK, managing multi-environment deployments with automated rollback and version control.
- Implemented Kinesis streaming architecture for real-time processing, achieving sub-second latency for passenger booking and flight status data ingestion.
- Built event transformation pipeline processing multi-region streams with sub-millisecond execution, delivering structured data to 8+ downstream systems.
- Designed scalable storage using S3 and DynamoDB with DynamoDB Streams for event-driven orchestration supporting 2M+ global users.

EDUCATION

Bachelor of Engineering in Computer Engineering

Apr. 2017 – Apr. 2021

Lokmanya Tilak College of Engineering

Navi Mumbai, India
